Preface

The Report on the Economic Survey of Small Industries for Calcutta was published in August 1954. Reports for the districts of West Dinajpur, Malda, Hooghly, Darjeeling, Nadia and 24-Parganas have already been submitted to Government. The present report refers to the Calcutta Industrial area which includes such urban and rural areas of the districts of Hooghly, Howrah and 24-Parganas as are adjacent to the city of Calcutta, but excludes the city itself. A summary report for the State of West Bengal has also been submitted to Government.

N. CHAKRAVARTI,

Director,
Government of West Bengal.

CALCUTTA,
The 12th January 1956.

Report on the Economic Survey of Small 3.557 Industries, 1954

District—Calcutta Industrial Area

- O.1. Introduction: The present report is the sixteenth of the series of reports on the small industries of the State. It deals with the small industries of the Calcutta Industrial area which has been defined as follows:—
 - (a) Howrah city including Sibpore Police Station, and
 - (b) the following police-stations:—
 - (i) All the police-stations of Barrackpore Subdivision.
 - (ii) Tollygunge,
 - (iii) Behala,
 - (iv) Metiabruz,
 - (v) Chinsurah,
 - (vi) Bhadreswar,
 - (vii) Serampore,
 - (viii) Uttarpara,
 - (ix) Bally,
 - (x) Chandannagore.

It will, therefore, be seen that the Calcutta Industrial area is composed of such urban and rural areas of the districts of Hooghly. Howrah and 24-Parganas as are adjacent to the city of Calcutta, but excludes the city itself.

- 1.1. Preliminary work: The listing of establishment in respect of small industries in urban areas was done on a complete enumeration basis but in the rural areas 10 per cent. of the total number of villages were selected for the purpose. All the villages in the sample, however, were completely enumerated. The number of towns and villages covered in this area is 30 and 17 respectively excluding Chandannagore town where no survey was conducted.
- 1.2. The etsablishments were classified into 86 classes according to the principal products manufactured in each establishment as in the case of the small industries of Calcutta. To meet the requirements of the Directorate of Industries, the following 14 classes of industries already included under the 86 broad classifications were, however, considered separately, namely, (1) steel trunks, (2) steelwire products, (3) cutlery, (4) cycle-parts, (5) locks, (6) silk-rearing, (7) silk-reeling, (8) silk-weaving, (9) artificial silk, (10) mats, (11) sports goods, (12) brush manufacture, (13) simple types of mathematical instruments and (14) coir and coir products. The small industries were thus classified into 100 classes in all. The names of the industries are shown in Appendix B. The schedule used for listing the names of industries is given in Appendix A.
- 1.3. The preliminary work as referred to in the above paragraph was completed by the field staff of th Agricultural Statistics Branch of the of the Bureau during the marginal time in 1952. In order to get more up-to-date information on the above 14 classes of industries, as mentioned in para. 1.2, it was necessary to carry out a special survey in certain centres

of the area where the industries under investigation were known to be localised. In Calcutta Industrial area during the first phase of the special survey, listing of establishments of specified industries was done on a complete enumeration basis in the towns of Howrah, South Dum Dum, Behala, Ultadanga and in Khardaha and Patipukur P.S. areas which are the localised centres for steel trunk, steel-wire products, cutlery, cycleparts, locks, brush manufactures, simple types of mathematical instruments and coir products industries.

- 1.4. Each class of industry was, as in the case of small industries of Calcutta, further subdivided into the following four categories, viz., (1) using power and employing less than 10 workers, (2) using power and employing 10 or more workers, (3) not using power and employing less than 10 workers and (4) not using power and employing 10 or more workers.
- 2.1. Specified industries: It is to be noted, however, that the localised centres, constituting a fraction of the total area were surveyed in the year 1954 and in order to ascertain the total number of establishments in respect of specified industries, the following procedure has been adopted. As already stated, listing of establishments in urban areas during both the surveys was done on a complete enumeration basis. In the preliminary survey, all the towns were surveyed but only selected centres where the specified industries are localised were covered during the second round survey. The total number of establishments in a specified industry has been obtained by summing up the number of such industries in those localised centres as found during the second round survey with the total number of establishments in the other towns as found during the first round. In the rural areas, estimates were first prepared for the entire area excluding the portions where the specified industries are localised. This number added up to the number of establishments obtained from the areas where the industries are localised was taken as the total number of establishments for the rural area as a whole.
- 2.2. It may be noticed in this connection that the above 14 industries were originally included under three parent classifications, viz., (i) General Engineering (29), (ii) Silk Miscellaneous (53) and (iii) Unspecified industries (63). The numbers of establishments now included under the three parent classifications, therefore, have been taken to be the remainders of the original population figures under these broad heads after deducting the total numbers of establishments under the specified industries in each group. For example, the number of establishments under "general engineering" was obtained by subtracting the algebraic sum of the numbers of establishments under "steel trunks", "cutlery", "steel-wire products", "cycle parts" and "locks" as obtained during the second round survey from the total number under parent classification in the preliminary survey. Expressed mathematically, the total number in the parent classification is (N—Eini) where N denotes the number of establishments obtained during these preliminary survey in the parent classification, and ni, represents the number of establishments in the i-th specified industry during the second round survey. The same procedure has been adopted in both rural and urban areas.
- 3.1. The Sample: The number of samples drawn from each category and class of industry has been taken to be as follows:—
 - (a) 1-25-Complete enumeration
 - (b) 26-100-40 per cent. with a minimum of 25
 - (c) 101-500-10 per cent. with a minimum of 40
 - (d) 501 & above—2;5 per cent. with a minimum of 50.

Samples were drawn systematically, but in those cases where systematic samples could not be drawn, principles of random sampling were followed. Altogether 2,481 samples were selected in this area.

3.2. On scrutiny of the economic survey records it was observed that both classification and category as recorded previously in certain schedules required to be changed. During the interval between listing and the economic enquiry, the number of wrokers engaged in some establishments was found to have been changed requiring amendments of division into categories. Moreover, it was found in some cases that the classification of an establishment by industry on the basis of principal products as reported by the owners at the listing stage was not correct. The population fingres accordingly had to be adjusted on the basis of sample figures. The basis finally adopted for adjustment of population figures is given below which is the same as in the case of the small industries of Calcutta.

There are 100 industries and 4 categories in each industry, i.e., in all $100 \times 4 = 400$ groups.

Let P_1 , P_2 and N_1 , N_2 denote respectively the population and sample figures in groups 1 and 2.

Let us further assume that n_1 out of N_1 samples as originally reported in group 1 actually belong to group 2 while n_2 out of N_2 samples actually belong to group 1 instead of group 2. The adjusted population

figures in groups 1 and 2, have been taken to be equal to
$$\left(P_1 - \frac{n_1 p_1}{N_1} + \frac{n_2 p_2}{N_2}\right)$$

$$\left(P_2 - \frac{n_2 p_2}{N_2} + \frac{n_1 p_1}{N_1}\right)$$
 respectively.

The above formulae have been generalised for adjusting population figures wherever more than two groups are involved.

- 4.1. Field work for the economic survey: The field work in connection with eeconomic survey of the small industries in Calcutta Industrial area was done in the marginal time in 1954 by the field staff of the Agricultural Statistics Branch in the districts of Howrah, Hooghly and 24-Parganas. The numbers of staff engaged and mandays spent in the survey work have been already included in the reports of the respective districts. Economic survey in the towns of Naihati, Basirhat, Howrah, Barrackpore, Serampore, Tollygunge, Ranigunge and Budge Budge was, however, taken up by the field section of the Industrial Statistics Branch. The survey in the above towns started on 10-3-1954 and was completed by 29-7-1954. In all 3 investigators and 14 assistant investigators were engaged in this work and 869 mandays were spent.
- 4.2. The difficulties encountered by the staff in Calcutta and other districts were mainly as follows:—
- (i) The owners of establishments in most cases do not maintain books of accounts. Information on specific items, were, therefore, given by them only approximately. There was a general tendency to show the cost of production as being higher than what it was. It was, therefore, necessary in many cases to ask questions on allied matters to check up their statements.
- (ii) It was a very difficult task on the part of investigators to collet information from such establishments as have grown up as necessary adjuncts to big trading concern, such as radio and gramophone repairing, compounding of Ayurvedic medicines attached to the dispensary of a physician, etc.

- (iii) Identification of samples caused immense troubles to the staff. In rural areas, particularly in the absence of any name of the concerns, it was very difficult to find out the actual location of the small industries and to trace out the owners of such concerns.
- (iv) Much difficulty was encountered by the staff in collecting the requisite information from the owners of the small industries, who are usually very suspicious about the purposes of any such enquiry into their economic affairs.
- 5.1. Compilation. The scheme for the compilation and analysis of data in respect of towns other than Calcutta and rural areas of the State was approved and sanction finally accorded by the Finance Department on 9th June 1954 for the entertainment of necessary staff and for other contingent expenses in this connection. The staff sanctioned were 1 statistician, 1 supervisor, 12 inspectors, 60 assistant computers, 2 lower division clerks, 1 typist and 5 orderlies and peons. The Statistician was in charge of scrutiny and analysis of the data. A Deputy Director of the Bureau supervised the work generally, the entrie operations being conducted under the guidance of the Director. The compilation and analytical work started on 7th June 1954 and was completed on 6th March 1955. As the report on the economic survey for all the districts could not be finalised by that date, sanction was accorded by the Finance Department for the post of 1 statistician, 1 supervisor and 2 inspectors for a further period of 3 months with effect from 7th March 1955.
- 6.1. Schedule of the economic enquiry: The schedules used for the economic enquiry are shown in Appendix C. The first part of the schedule dealing with the general economic condition of the associated family remained the same as designed for the economic enquiry in Calcutta. Some additions were, however, made in the second part for the purpose of obtaining additional information relating to availability of raw materials, agencies for sale, character of competition, if any, faced by the industries and details about machineries and tools used, as required by the Directorate of Industries.
- **Details of the Sample:** A statement showing the total number of samples allotted in the district, number of schedules rejected due to different causes and the number of schedules finally accepted for analysis is shown in Appendix D. It will be seen that out of a total number of 2,481 samples, 1,213 samples only were accepted for analysis, 1,268 samples were rejected due to various reasons. Out of these 1,268 rejected samples, 233 were found closed, 295 not in existence any longer and 390 could not be traced. Sixtytwo were found registered with the Chief Inspector of Factories and 207 were rejected due to various reasons. In case of 71 samples the owners refused to give any information. These accounted for a total of 1,258 rejections. The remaining 10 schedules were rejected on scrutiny. Regarding factories which were not found in existence at the time of the economic survey in 1954, it may be stated that these were found functioning at the listing stage in 1953. Many of these small establishments crop up and go out of existence frequently or shift from place to place. The total number of such establishments, perhaps, remain more or less the same from year to year in normal Whatever may be the implications of these peculiar circumstances, the estimates presented in this report refer to the economic conditions as found in the sample in 1954 applied to the total number of concerns as found during the listing stage in 1952.
- 8.1. Industries of the district: Appendix D referred to in the preceding paragraph shows the samples allotted to 74 classes of industries. As stated

in paragraph 1.2 the total number of classes adopted for the survey is 100 as shown in Appendix B. No establishment of the remaining 26 classes of industries was found in the district at any stage of the survey. It will be noticed from Appendix D that information was not available for 11 classes of industries out of the above 74. These were found non-existent at the time of the economic survey. The economic data included in this report, therefore, refer to the remaining 63 industries. Only 43 out of 63 industries had more than 20 establishments according to estimates made. Industries having less than 21 establishments were lumped together as "all other industries" for the purpose of etsimates of details. It was, however, decided that the specified industries as mentioned in paragraph 1.2 for which detailed information is required by the Directorate of Industries, should be shown separately and not included under the head "all other industries" even if any such industry had less than 21 establishments. Only 13 industries having less than 21 establishments were accordingly lumped together and the tables show details in respect of 50 industries. These are (1) wheat products, (2) rice products, (3) biscuits, (4) sweets, (5) vegetable oils, (6) soap, (7) tanning, (8) earthenwares, (9) paper products, (10) cotton textiles, (11) chemicals, (12) brass products, (13) general engineering, (14) blacksmith, (15) steel trunk, (16) steelwire products, (17) cutlery, (18) cycle parts, (19)locks, (20) footwear, (21) rubber, (22) bricks, (23) saw milling, (24) wood chopping, (25) woodware, (26) hamboo products, (27) tobacco, (28)bidi, (29) groundnut decorticating, (30) printing, (31) shawl repairing, (32) hosiery, (33) thread ball, (34) textiles dyeing, (35) tailoring, (36) rope, (37) unspecified industries, (38) gold ornaments, (39) hay cutting, (40) watch repairing, (41) toys, (42) dairy, (43) laundry, (44) photographs, (45)photoframing, (46) carts, (47) musical instruments, (48) mats, (49) brush manufacture and (50) coir products. The tables also show details for 13 industries pooled together, each of which has less than 21 establishments in the area, namely, (1) fruits, (2) distilleries (3) paints, (4) glass, (5) woollen textiles, (6) coach building, (7) ship building, (8) textiles machinery, (9) electroplating, (10) apparel, (11) button manufacturing, (12) conch products and (13) wax products. Table 1 indicates the number of establishments which were found at the listing stage but were found closed or non-existent during the survey, in the second phase. The establishments belong to 11 classes of industries namely, (1) rice milling, (2) sugar, (3) ceramics, (4) plywood, (5) jute textiles, (6) electric fans, (7) hume pipes, (8) lac, (9) plastics (10) electricity generation and (11) simple types of mathematical instruments.

- 8.2. As pointed out in para 7.2 in the report of the small industries of Calcutta, boat-making as obtained in the other towns and rural areas of the State has been shown under the classification "ship-building".
- 9.1. Results of the survey: As stated in paragraphs above 1,213 samples were accepted for analysis. The tables prepared as a result of this analysis are described below. The table headings are:—
 - (1) Summary of results.
 - (2) Employment position in the associated families by industries.
 - (3) Distribution of average number of non-working dependants in the associated families by industries and by causes.
 - (4) Percentage distribution of the members of the associated families (including servants, tutors, etc.) by industries and by standards of education.
 - (5) Average annual income (Rs.) of the associated families by industries and by sources of income.

- (6) Distribution of land (owned and possessed) of associated families by industries.
- (7) Production of crops grown per associated family by industries and by varieties of crops.
- (8) Percentage distribution of family expenditure on groups of items of the associated families by industries.
- (9) Average number of man-months worked per establishment by industries and by total value of assets.
- (10) Average value (Rs.) of assets per establishment by industries and by different assets.
- (10A) Estimated number of some important machines used by selected industries.
- (11) Average value (Rs.) of liabilities per establishment by industries and by different liabilities.
- (12) Distribution of liabilities (Rs.) per establishment by industries and by sources of liabilities.
- (13) Labour employed per establishment by different age-groups.
- (14) Hired labour employed and wages paid per man-month per establishment by age groups.
- (14A) Distribution of family labour by industries.
 - (15) Consumption of fuels, lubricating materials, raw materials, etc., per establishment by industries.
- (15A) Quantity and value of raw materials, etc., per establishment by industries.
 - (16) Production and sale of finished goods, amount received for work done for others per establishment and value of work done per man-month by industries.
- (16A) Quantity and value of finished products made during the year for sale per establishment by industries.
 - (17) Average cost as percentage of average value of production per establishment by industries.
- 9.2. Wherever possible, data within each industry have been shown separately for each of the four categories of establishments enumerated in paragraph 1.4.
- 9.3. The weighted averages in each industry have been calculated on the basis of total figures. The 13 industries, the total number of establishments in each of which is 20 or below, have been grouped and shown as "all other industries". Reference may be made to the individual tables for obtaining information in detail. In the paragraph below an attempt has been made to bring out the salient features only.

10.1. The tables are discussed below:

Table 1: Summary of results.—This table summarises the statistics on (i) total number of establishments, (ii)total and average value of assets, (iii) total and average number of labour employed divided into family labour and hired labour, (iv) total and average amount of wages paid to hired labour, (v) total and average value of raw materials, (vi) total and average value of fuels consumed. (vii) total and average cost of production excluding family labour, (viii) total and average value of work done per establishment for each industry as well as (ix) average total cost (excluding family labour) as percentgae of average value of production. Column (4)

of the table shows the number of establishments within the area in each industry. It will be noticed that there were altogether 16,145 small manufacturing establishments in the district. Four-hundred establishments were, however, excluded for lack of information at the listing stage. The number of establishments within each industry, for which relevant information could not be obtained, is given in column (5). Column (6) shows the number of establishments on the basis of which the estimates in the different tables presented in this report were prepared. It will be seen that figures in column (6) have been obtained by subtracting the figures in column (5), from the figures given in column (4).

The total number of establishments in all small industries of Calcutta Industrial area has, therefore, been estimated to be 15,745. Total value of raw materials used is about Rs. 9.1 crores, total value of work done is about Rs. 15.1 crores. Total labour employed is about 47,000 of whom about 21,300 only are hired. Total wages paid to hired labour per year in the small industries of Calcutta Industrial area are about 1. 34 crores.

- 10.2. Details for individual industries will be available in the tables. For ready reference the industries have been divided into groups by different characteristics and shown below. Except (a) below the distributions are for averages. For example, in those industries whose assets have been shown as between Rs. 501 to Rs. 1,000 there may be a few establishments whose assets are above or below the aforesaid range. The statement means that the average assets of establishments in those industries fall within this range. It should also be noted that in some cases the value of a few large establishments often raises the average value for the industry as a whole so as to shift the industry into a group of higher value. For a study of details reference should be made to the appropriate tables at the end of the report. The distributions have been shown under the following headings:—
 - (a) Distribution into groups by number of establishments.
 - (b) Distribution into groups by average value of assets per establishment.
 - (c) Distribution into groups by average number of workers per establishment including family labour.
 - (d) Distribution into groups by percentage of family labour to total labour per establishment.
 - (e) Distribution into groups by average wages paid to hired labour per establishment.
 - (f) Distribution into groups by total labour employed per industry including family labour.
 - (g) Distribution into groups by average value of raw materials consumed per year per establishment.
 - (h) Distribution into groups by average cost of production excluding family labour per year per establishment.
 - (i) Distribution into groups by average value of work done per year per establishment.
 - Distribution into groups by total value of work done per year per industry.
 - (k) Distribution into groups by average income per year per establishment including cost of family labour.

The above are discussed below. The main tables show estimates for 50 industries, each separately and 13 industries lumped together. But in presenting the distribution as indicated above, each industry of the group of

the aforesaid 13 industries has been considered separately. The number of establishments being small the estimates are subject to large errors in respect of these 13 industries. The tables should, therefore, be used with caution wherever any of these industries occur.

(a) Distribution into groups by number of establishments.

Number of establishments.	Number of indus- tries.	Names of industries.
(1)	(2)	(3)
Up to 5		Fruits processing, woollen textiles, steelwire products, locks, coach building, textiles machinery, wax products and brush coir products.
62 5	14	Distilleries, paints, glass, cutlery cycle parts, saw milling, tobacco, groundnut decorticating, ship building, electroplating, apparel, buttons, conch products and mats.
26—100	17	Vegetable oils, soap, tanning, paper products, steel trunk, rubber, bricks, wood chopping, shawl repairing, hosicry thread, textiles dyeing, toys, photographs, photo-framing, carts and musical instruments.
101500	15	Rice products, biscuits, earthen wares, cotton textiles, chemicals, brass products, blacksmith, footwear, bamboo products, printing, rope, unspecified industries, hay outting, watch repairing and laundry.
5012,500		Wheat products, sweets, general engineering, woodware, bidi, gold ornaments and dairy.
2,501 and above		Tailoring.
Total	63	

The names of the industries have been shortened in this table. Here printing includes book-binding and embossing as well. It is evident from this table that none of the industries under fruit, woollen textiles, steelwire products, locks, coach building, textiles machinery, wax products, brush and coir products, shown in the first row have more than 5 establishments. Similarly, the last row shows that there are more than 2,500 establishments in only one industry, namely, tailoring. The actual number is shown in the table itself. It may be noted that the largest number of small establishments occur in the following 8 industries, namely, wheat products, sweets, general engineering, woodware, bidi, gold ornaments, dairy and tailoring. These 8 industries account for about 69 per cent. of the total of 15,745 establishments.

(b) Distribution into groups by average value of assets per establishment.

Average value assets. (Rs.)	of	Number of industries.	Number of establish- ments.	Names of industries.
(1)		(2)	(3)	(4)
Up to 250	••	2	134	Rice products and apparel.
2515 00	••	7	903	Blacksnith, wood chopping, bamboo products, thread, coach building, photo-framing and musical instruments.
5011,000	••	12	4,261	Earthenwares, paper products, locks, foot- wear, shawl repairing, tailoring, hay cutting, watch repairing, toys, laundry, carts and conch products.

Average value of assets.	Number of industries.	Number of establishments.	Names of industries
(Rs.) (1)	(2)	(3)	(4)
1,001—5,000 .	. 22	9,479	Wheat products, biscuits, sweets, tanning- glass, cotton textiles, woollen textiles, chemicals, general engineering, swel trunk, cutlery, rubber, woodware, tobacco, bidi, unspecified industries, gold ornaments, electroplating, dairy, photographs, but- tons and mats.
5,001—25,000	15	908	Distilleries, paints, soap, bress products, steelwire products, bricks, saw n illing, groun-lnut decorticating, printing, hosiery, textiles dyoing, rope, ship building, textiles machinery and wax products.
25,001 and above		60	Fruits processing, vegetable oils, cycle parts, brush and coir products.
Total	63	15,745	

From the first row it appears that there are 2 industries, namely, rice products and apparel in which the total number of establishments is 134 and in which the average value of total assets does not exceed Rs. 250. Similarly, the last row shows that there are 60 establishments in 5 industries, namely, fruits, vegetable oils, cycle parts, brush and coir products in which the assets exceed Rs. 25,000 per establishment. The concentration is the highest in the group Rs. 1,001-5,000 which accounts for about 60 per cent. of the total number of establishments. The highest concentration of industries is also in this group.

(c) Distribution into groups by average number of workers per establishment including family labour.

Average number of workers.	Number of industries.	Number of establishments.	Names of industries.
(1)	(2)	(3)	(4)
0-1	1		Locks.
1—2	12	1,553	Rice products, paper products, woollen textiles, blacksmith, footwear, wood chop- ping, thread, watch repairing, photo- graph, photo-framing, apparel and mats.
2—3	23	10,292	Wheat products, sweets, tanning, cotton textiles, cutlery, bamboo products, tobacco, bidi, shawl repairing, tailoring, coach building, unspecified industries, gold ornaments, hay cutting, toys, dairy, laundry, carts, buttons, conch products, n usical instruments and brush.
35	14	3,069	Biscuits, fruits processing, glass, earthenwares, chemicals general engineering, steel trunk cycle parts, rubber, bricks, woodware, groundnut decorticating, electroplating and wax products.
57	6	423	Paints, soap, brass products, steelwire products, printing and hosiery.
7 and above	7	404	Distilleries, vegetable oils, saw milling, textiles, dyeing, rope, textiles machinery and coir products.
Total	3	15,745	
TANK	-	10,740	

The group 1-2 actually indicates the range 1.01-2.00. Similarly, for other groups. The first row shows the names of industries which are smallest in size and do not employ more than one person on the average. Similarly, for other rows. Concentration is the highest in the group 2-3 which accounts for 65 per cent. of the total number of establishments. The largest number of industries also occurs in this group. Seven industries with 404 establishments employ more than 7 persons on the average.

(d) Distribution into groups by percentage of family lobour to total labour per establishment.

Percentage of family labour to total labour.	Number of industries.	Number of establish- ments.	Names of industries.
(1)	(2)	(3)	(4)
0—30		443	Distilleries, vegetable oils, paints, soap, steel wire products, saw milling, textiles dyeing, rope and textiles machinery.
30—50	17	3,131	Biscuits, glass, brass products, general engineering, steel trunk, cycle parts, rubber, bricks, woodware, groundnut decorticating, printing, shawl repairing, hosiery, ship building, conch products, wax products and coir products.
50—70	15	6,714	Wheat products, fruits processing, earthenwares, cotton textiles, chemicals, bamboo products, tobacco, bidi, thread, tailoring, unspecified industries, electroplating, dairy, carts and brush.
70—90	15	5,119	Sweets, tanning, woollen textiles, black- smith, cutlery, footwear, gold ornaments, hay cutting, watch repairing, toys, laundry, photographs, photo-framing, but- tons and musical instruments.
90—100		338	Rice products, paper products, locks, wood chopping, coach building, apparel and mats.
Total	63	15,745	

Here the group 30-50 actually indicates the range 30.01-50.00. Similarly, for other groups. The first and the second row indicates that 26 industries, viz., distilleries, vegetable oils, paints, soap, steel-wire products, saw milling, textiles dyeing, rope, textiles machinery, biscuits, glass, etc., with 3,574 establishments employ family labour which is less than 50 per cent. of the total labour. The remaining 12,171 establishments belonging to 37 industries and constituting about 77 per cent. of the total number of establishments employ more of family labour than hired labour. The concentration is the highest in the groups 50-70 and 70-90 accounting for about 75 per cent. of the total number of establishments. In 7 industries, namely, rice products, paper products, etc., having 338 establishments, the percentage of family labour to total labour exceeds 90.

(e) Distribution into groups by average wages paid to hired lobour per year per establishment.

Average wages paid to hired labour (Rs.).	Number of industries.	Number of establish- ments.	Names of industries.
(1)	(2)	(3)	(4)
Up to 250	11	1,550	Paper products, blacksmith, footwear, tobacco, thread, watch repairing, toys, laundry, photographs, photo-framing and buttons.
251—1,000	21	10,216	Wheat products, sweets, tanning, glass, woollen textiles, outton textiles, chemicals, cutlery, bamboo products, bidi, shawl repairing, tailoring, ship building, unspecified industries, gold ornaments, hay cutting, electroplating, dairy, earts, conch products and musical intruments.
1,001—2,500	14	3,219	Biscuits, fruits processing, earthenwares, brass products, general engineering, steel trunk, cycle parts, rubber, bricks, woodware, groundnut decorticating, printing, wax products and brush.
2,501—5,000	6	161	Distilleries, vogetable oils, paints, soap, hosiery and coir products.
5,001 and above	5	356	Steelwire products, saw milling, toxtiles dyeing, rope and toxtiles machinery.
Total	57	15,502	

The number of industries shown in this table is 57 as against 63 in other tables. This is on account of the fact that in 6 industries with 243 establishments, no hired labour is employed and no payment of wages is made by them. The largest number of establishments pays between Rs. 251-1.000 per year as wages to hired labour. It is noticeable that only 5 industries, namely, steel-wire products, saw milling, textiles dyeing, rope and textiles machinery, having 356 establishments pay wages above Rs. 5,000 per year on the average to hired labour. The steel wire products industry, in particular, having only one establishment pays wages above Rs. 10,000.

(f) Distribution into groups by total labour employed per industry including family labour.

Total labour.	Number of industries.	Number of establishments.	Names of industries.
(1)	(2)	(3)	(4)
Up to 25		35	Fruits processing, woollen textiles, steel- wire products, locks, coach building, apparel, conch products, wax products and brush.
26—100	16	266	Distilleries, paints, tanning, glass, cutlery, cycle parts, tobacco, groundnut decorticating, thread, ship building, textiles machinery, electroplating, photo-framing buttons, mats and coir products.

Total labour	•	Num5er of industries.	Number of eatablish	Names of industries.
. (1)		(2)	ments. (3)	(4)
101—500		20	1,630	Rice products, biscuits, vegetable oils, soap paper products, chemicals, steel trunks, rubber, bricks, saw milling, wood chopping, shawl repairing, hostery, textiles dyeing, watch repairing, toys, laundry, photographs, carts and musical instruments.
5011,000	••	9	2,591	Earthenwares, cotton textiles, brass products, blacksmith, footwear, bamboo products, printing, unspecified industries and hay cutting.
1,0015,000	••	6	4,739	Wheat products, woodware, bidi, rope, gold ornaments and dairy.
5,001 and above	• •	3	6,484	Sweets, general engineering and tailoring.
Total		63	15,745	

It will be seen from the first row that there are 9 industries, namely, fruits processing, woollen textiles, steel-wire products, locks, coach building, apparel, conch products, wax products and brush, each of which employs not more than 25 workers in all the establishments together. Similarly, the second row shows that each of the 16 industries, namely, distilleries, paints, tanning, etc., employs between 26 and 100 workers. It will be noticed that the largest number of total labour (5,001 and above) is employed in sweets, general engineering and tailoring. The actual number of total labour employed by each industry may be read from table I.

(g) Distribution into groups by average value of raw materials consumed per year per establishment.

Average value of materials. (Rs.)	raw	Number of industries.	Number of establish- ments.	Names of industries.
(1)		(2)	(3)	(4)
Up to 500	••	9	839	Blacksmith, cutlery, locks, shawl rapairing, ship building, electroplating, watch repair- ing, laundry and carts.
5012,500	••	20	5,064	Wheat products, rice products, glass, earthenwares, paper products, footwear, rubber, wood chopping, bamboo products, tobacco, groundnut decorticating, printing, thread, tailoring, coach building, toys, photographs, photo-framing, apparel and musical instruments.
2,501—10,000		18	7,808	Sweets, pairts, cotton textiles, woollen textiles, general engineering, steel trunk, steelwire products, cycle parts, bricks, woodware, bidi, unspecified industries, hay cutting, dairy, buttons, conch products, mats and brush.
10,00125,000	••	9	1,516	Biscuits, distilleries, soap, tanning, chemi- cals, saw milling, hesiery, textiles, dyeing and gold ornaments.
25,00150,000	••	5	475	Fruits processing, brass products, rope, textiles machinery and wax products.
50,001 and above	••	2	43	Vegetable oils and coir products.
Total	• •	63	15,745	

The above table shows the extent of use of raw materials by different industries. The first row indicates that the average value of raw materials used per establishment does not exceed Rs. 500 in 9 industries, namely, blacksmith, cutlery, locks, shawl repairing, ship building, electroplating, watch repairing, laundry and carts. The concentration is heavy in two groups, Rs. 501-2,500 and Rs. 2,501-10,000. The former group has 32 per cent, and the latter 50 per cent., a total of 82 per cent. of the total number of establishments. It may be pointed out here that there are 518 establishment belonging to 7 industries, namely, fruits processing, brass products, rope, textiles machinery, wax products, vegetable oils and coir products in which the average value of raw materials used per establishment exceeds Rs. 25,000

(h) Distribution into groups by average cost of production excluding family labour per year per establishment.

Average cost of production. (Rs.)	f	Number of industries.	Number of establish- ments.	Names of industries.
(1)		(2)	(3)	(4)
Up to 1,000	••	4	658	Paper products, blacksmith, coach building and watch repairing.
1,001—2,500	••	15	3,372	Rice products, cutlery, locks, wood chopping, shawl repairing, thread, tailoring, electroplating, toys, laundry, photographs, photoframing, carts, apparel and musical instruments.
2,501—10,000		22	9,496	Wheat products, sweets, glass, earthenwares, cotton textiles, woollen textiles, general engineering, cycle parts, footwear, rubber, woodware, bamboo products, tobacco, bidi, groundnut decorticating, printing, ship building, unspecified industries, hay cutting, dairy, conch products and mats.
10,001—25,000		13	1,633	Biscuits, distilleries, paints, soap, tanning, chemicals, steel trunk, steel wire products, bricks, hosiery, gold ornaments, buttons and brush.
25,001 — 50,000			543	Fruits processing, brass products, saw milling, textiles dyeing, rope, textiles machinery and wax products.
50,001 and above			43	Vegetable oils and coir products.
Total		63	15,745	

The cost of production shown above includes all costs, that is, cost of raw materials, fuels, rents, etc., and labour including contribution of casual labour but excluding that of family labour. The largest concentration of industries and establishments is in the group Rs. 2,501-10,000. It is noticeable that the average cost of production per year per establishment exceeds Rs. 50,000 in the cases of two industries, namely, vegetable oils and coir products with 43 establishments. It has already been pointed out in the preceding paragraph that the value of raw materials consumed exceeds Rs. 50,000 in the case of these industries. The actual figures for the values of raw materials consumed and total costs incurred by these industries may

be read from the table. The cost of production is less than Rs. 1,000 in the cases of the following 4 industries, namely, paper products, blacksmith, coach building and watch repairing:-

(i) Distribution into groups by average value of work done per year per establishment.

Average value of work done (Rs.).	Number of industries.	Number of establish- ments.	Names of industries.
(1)	(2)	(3)	(4)
Up to 2,500	13	1,040	Rice products, paper products, blacksmith, cuttery, locks, shawl repairing, thread, coach building, watch repairing, toys, photo-framing, carts and apparel.
2,501—7,500	18	5,402	Wheat products, earthenwares, footwear, rubber, wood chopping, bamboo products, tobacco, printing, tailoring, ship building, unspecified industries, hay cutting, electroplating, laundry, photographs, conch products, musical instruments and mats.
7,501—25,000	20	8,607	Sweets, paints, soap, tanning, glass, cotton textiles, woollen textiles, chemicals, general engineering, steel trunk, steel wire products, cycle parts, bricks, woodware, bidi, groundnut decorticating, hosiery, gold ornaments, dairy and buttons.
25,001—50,000	10	653	Biscuits, fruits processing, distilleries, brass products, saw milling, textiles dyeing, rope, textiles machinery, wax products and brush.
50,001 and above		43	Vegetable oils and coir products.
Total	63	15,745	

The above table shows the average value of work done (based on sale value) as against the cost of production shown in the previous table. The average production value is less than Rs. 2,500 in 1,040 establishments which constitute 7 per cent. of the total number of establishments. By far the largest number has an average production value of Rs. 7.501-25,000, representing about 55 per cent. of the total number of establishments. It may be pointed out that in 43 establishments belonging to 2 industries. namely, vegetable oils and coir products the average value of work done per establishment exceeds Rs. 50,000. It has already been discussed in the above paragraphs that costs incurred by these two industries are also very high.

(j) Distribution into groups by total value of work done per year per industry.

Total value of work done. (Rs.)	Number of industries.	Number of establishments.	Names of industries.
(1)	(2)	(3)	(4)
Up to 10,000	2	7	Locks and coach building.
10,001—50,000	2	72	Fruits processing, woollen textiles, steel- wire products, cutlery, thread, apparel, conch products and brush.

Total value of work done. (Rs.)	Number of industries.	Number of establish- ments.	Names of industries.
(1)	(2)	(3)	(4)
50,001—2,50,000	18	604	Rice products, distilleries, paints, glass, paper products, cycle parts, tobacce, shawl repairing, ship building, textiles machinery, electroplating, toys, photo-framing, carts, buttons, musical instruments, wax products and mats.
2,50,001—10,00,000	13	1,244	Soap, tanning, blacksmith, steel trunk, rubber, saw-milling, wood chopping, groundnut decorticating, printing, watch repairing, laundry, photographs and coir products.
10,00,001—25,00,000	10	2,515	Wheat products, earthenwares, chemicals, footwear, bricks, bamboo products, hosiery textiles dyoing, unspecified industires and hay cutting.
25,00,001 —1,00,00,00	00 6	4,386	Biscuits, cotton textiles, brass products, woodware, tailoring and dairy.
1,00,00,001 and above	6	6,717	Sweets, vegetable oils, general engineering, bidi, rope and gold ornaments.
Total	63	15,745	

The above table shows that the total value of work done per year in each of the following 6 industries, namely, sweets, vegetable oils, general engineering, bidi, rope and gold ornaments exceeds one errore of rupees. In each of the following six industries, namely, biscuits, cotton textiles, brass products, woodware, tailoring and dairy, the value of work done per year is between 25 lakhs and one errore of rupees. The concentration of industries is heavy in two groups, Rs. 50,001-2,50,000 and Rs. 2,50,000-10,000,000 although the total number of establishments belonging to these ranges are 604 and 1,244, respectively, constituting in all 12 per cent. of the total number of establishments.

(k) Distribution into groups by average income per year per establishment including cost of family labour.

Average income per establishment (Rs.)		industries. es	Number of establish- ments.	Names of industries.
(1)		(2)	(3)	(4)
Up to 500		2	129	Paper products and thread.
5011,000	••	7	886	Rice products, fruits processing, wood chopping, bamboo products, hay cutting, photo-framing and apparel.
1,0012,000		28	10,954	Wheat products, sweets, glass, earthenwares, woollen textiles, blacksmith, steel trunk, cutlery, locks, footweer, woodware, tobacco, bidi, shawl repairing, tailoring, coach building, ship building, unspecified industries, gold ornaments, watch repair-

ing, toys, laundry, photographs, carts, buttons, conch products, musical instru-

ments and mats.

Average income per establishment (Rs.)	Number of industries.	Number of establish- ments.	Names of industries.
(1)	(2)	(3)	(4)
2,001—5,000	20	3,399	Biscuits, distilleries, paints, soap, tanning, cotton textiles, chemicals, general engineering, steelwire products, cycle parts, rubber, saw milling, printing, hosiery, rope, textiles machinery, electroplating, dairy, wax products and brush.
5,001 and above		377	Vegetable oils, brass products, bricks, groundnut decorticating, textiles dyeing and coir products.
Total	63	15,745	

The above table shows the distribution by average income, which includes the value of family labour. It is noticeable that two of the industries, namely, paper products and thread having 129 establishments have an average annual income below Rs. 500. The highest concentration is in the income group of Rs. 1,001-2,000. Six industries, namely vegetable oils, brass products, bricks, groundnut decorticating, textiles dyeing and coir products have an average profit exceeding Rs. 5,000 per year. The rest of the industries show profits varying from Rs. 501-5,000. Other details may be read from tubles 1 and 17.

Table 2: Employment position in the associated families by industries.—This table gives a distribution of the members of the associated families as to whether the members are in gainful employment, non-working dependants or domestic servants, etc. Those members (including the owner of the establishment) who contribute to the family income either by their personal occupations or by working in the industry, agriculture, trade, etc., belonging to the family, have been taken to be in gainful employment. The members who work part-time in the said industry, agriculture or trade, etc., have also been included under this head. The second category, namely, "non-working dependants" includes those who do not work in the industry, agriculture or trade, belonging to the family and depend entirely on the income of the family for their livelihood. In the third category have been shown all other members taking meals with the family including domestic servants, tutors, guests etc. The average size of the family, as indicated in column (4) is the total of the averages shown in the subsequent columns giving the detailed distribution.

The average size of family is very high (13.50) in brush manufacture. It may be pointed out that for this industry the estimates are based on one sample only. It may be seen from the table that the average number of servants etc., in these families is also highest (1.50) in the table. The average size of the family lies roughly between 4 and 7 persons in 37 out of 51 industries for which estimates have been shown separately in this table. It is the lowest (2.40) in the rice products industy. It is also noticeable that in brush manufacture industry the average number of non-working dependants is also the highest (10.00) so as to make up a high average in the size of the family. The number of non-working dependants appears to be the lowest (0.50) in the case of carts industry where the family size is as low as 3.33. In two industries, namely, paper products and mats, the numbers of females in gainful employment are much greater than those of the males. All male adults belonging to the families associated with steel wire products, cutlery and carts industries are found to be gainfully

employed. In case of industries, biscuits, soap, general engineering, steel trunk, steel wire products, cutlery, cycle parts, locks, rubber manufactures, saw milling, woodware, shawl repairing, textiles dyeing, rope, gold ornaments, hay cutting, watch repairing, photographs, carts, musical instruments, brush manufacture and coir products, no female is employed in gainful occupation. The total number of adults in gainful employment varies in general from 1.00 to 2.53. It is to be remembered, however, that the working dependants have been included under persons in ganiful occupation and it is not unlikely that many adults do part-time work in these industries. In many cases children below 16 years in age appear to be gainfully employed. The average number of such children is not significant. It will be seen from column (17) that the average number of 'domestic servants, tutors, guests and others' is less than 1 in all cases except in the industries biscuits, brush products and coir products. It is, however, significant that there are domestic servants in almost all cases.

(ii) The total number of small establishments in the Calcutta industrial area has been estimated to be 15,745. Taking the average family size to be about 5 and assuming that each family owns not more than one manufacturing establishment, it will be seen that the small industries of the area support a population of about 79 thousands belonging to the families of the owners of these concerns. It has been seen that the total number of hired labour in these industries is of the order of 21,300. Constitution of their families and the number of earners per family are not known. On the assumption that each earner supports 5 persons including himself, it may be noted that the small industries in Calcutta industrial area support 1,06,500 persons. The small industries, therefore, directly support a population of about 1.9 lakhs out of the aggregate population of about 25.2 lakhs in the area excluding Chandannagore town.

Table 3: Distribution of average number of non-working dependants in the associated families by industries and by causes.—In table (2) was given an indication as to the average number of non-working dependants. This table points out the causes for the dependance and shows the contribution of each of the causes to the total number. The causes of dependance have been shown under different categories, viz., student, sick or infirm, dull season, want of employment and not seeking employment.

As has been stated earlier, the average number of non-working dependants is the highest (10.00) in the brush manufacture industry. It is also comparatively high in hosiery, rubber manufactures, photographs and rope industries where the figures are 7.92, 6.52, 6.11 and 6.03 respectively. The average number is as low as 1.20 in rice products, 1.58 in biscuits, 1.42 in tanning, 1.00 in cutlery, 1.84 in footwear and 0.50 in carts industries. In all the remaining industries the number varies between 2.00 and 5.92. It is also noticed that the highest contribution is from column (8), i.e., persons not seeking employment. This, however, includes children, old and retired persons and women having no personal occupation. The average number of persons not seeking employment is the highest (4.83) in hosiery. In steel-wire products and carts industries it is observed that the non-working dependants are only those who do not seek employment. In the threadball making industry, the avergae number of non-working dependants who do not seek employment appears to be the lowest (0.32). The average number of such persons is also less than 1 in the following industries, namely, rice products, biscuits, cutlery and carts. Next in importance comes column (4), i.e., students. There are very appreciable numbers of students in the families engaged in almost all the industries.

In soap, threadball making and brush manufacture industries the number of students appears to be proportionately the highest. It is also observed that a fair number of sick people are being supported. Unemployment due to dull season has been observed in two industries only, namely, bricks and rope. There is a considerable number of persons getting no employment in the families associated with 37 out of 51 industries shown in this table. Other details may be read from the table itself.

Table 4: Percentage distribution of the members of the associated families (including servants, tutors, etc.) by industries and by standards of education.—This table furnishes an idea of the standard of education of the members of the families associated with the industries. Columns (4) and (5) show the percentages under "illiterate" and under "just literate".

It will be clear that the members are mostly illiterate or just literate. There is, however, no illiteracy in the families associated with steel-wire products industry, according to their own statements. It may be pointed out in this connection that the estimates for this industry have been based on one sample only. The percentage of illiterates is more than 50 in the families associated with 11 industries of the district, namely, tanning earthenwares, blacksmith, cycle parts, footwear, bamboo products, groundnut decorticating, dairy, laundry, carts and mats. The percentage distribution of members above matric standard has been given in column (9) to (14) and it is noticed that a small percentage of members only could receive higher standard of education beyond this stage. For other details, reference may be made to the table itself.

Table 5: Average annual income (Rs.) of the associated families by industries and sources of income.—This table gives information on the average net income per family from different sources, such as, agriculture, industry, trade, other occupations, etc. Information in respect of each industry has been given for each of the four categories of establishments, the same as mentioned in paragraph 1.4. The pooled picture of the industry as a whole has also been indicated.

It will be seen that the families associated with all industries for all categories have net income from industrial source, as shown in column (7). In 14 industries only, namely, biscuits, sweets, earthenwares, cotton textiles, chemicals, brass products, general engineering, steel trunk, bidi, hosiery, textiles dyeing, rope, coir products and "all other industries", there are establishments in category 4, i.e., without power and employing more than 9 workers, and it is observed that the income from such establishments is greater than the income from the establishments under category 3, i.e., without power and employing less than 10 workers, except in the case of steel trunk industry where the estimates for category 4 have been based on one sample only. Income from industry is higher than that from any other source in the associated familiies except in the industries, namely, threadball making and brush manufacture. In the families associated with these two industries the major income is derived from trade. The highest income per family from industry is Rs. 14,956 in vegetable oils and the lowest Rs. 163 in threadball making. The next highest income (Rs. 10,266) is observed in the case of groundnut decorticating industry. In all the remaining industries income lies between Rs. 1,033 and Rs. 2,812 except in the cases of wheat products (Rs. 963), rice products (Rs. 515), soap (Rs. 3,265), paper products (Rs. 420), brass products (Rs. 5,327), bricks (Rs. 6,633), wood chopping (Rs. 775), bamboo products (Rs. 842), textiles dyeing (Rs. 4,815), hay cutting (Rs. 979), dairy (Rs. 3,115), photoframing (Rs. 920) and coir products (Rs. 6,321). It may be seen from the table that the families associated with rubber manufacture industry have, according to their own statements, suffered losses in agricultural operations due to damage of crops. This will account for a negative income of Rs. 28 on the average shown against this industry. Only 26 industries of the area have made some income from agriculture not exceeding Rs. 61. There is no income from agriculture in the remaining 24 industries. In almost all the industries excepting steel-wire products, as stated earlier, and coir products income from industry is supplemented by that from trade, profession and other occupations. For other details, reference may be made to the table itself.

(ii) The expression "mechanised" in this report has been used to denote power-driven establishments as against hand-operated concerns which will be called non-mechanised. It may be noticed from the table that 24 industries of the did not show any mechanised area establishments, that is establishments using power. In the remaining 27 industries a few mecalinised establishments have been found. In the cases of vegetable oils, steelwire products, saw milling and brush manufacture industries, however, it is observed that informations could not be collected in respect of the non-mechanised concerns under them. All estimates for these four industries, therefore, are based on the mechanised establishments only. It may be seen that except in rubber manufacture, bricks, woodware and coir products industries, mechanisation appears to bring in higher incomes. In the case of woodware industry, however, it is observed that income derived by the large mechanised establishments are much higher than that derived by the smaller concerns, both mechanised and non-mechanised. In the cases of saw milling and unspecified industries, however, the mechanised big concerns appear to earn lower incomes in comparison with what is earned by the smaller concerns under the respective industries. It may also be noted that industrial income in the larger non-mechanised establishments under sweets, cotton textiles, chemicals, general engineering and hosiery industries, has been much more than that in the mechanised large or small establishments.

Table 6: Distribution of land (owned and possessed) of associated families by industries.—This table furnishes information on the land (cultivated or otherwise) which is owned or possessed per family. Total acres in possession as shown in column (8) have been taken to be equal to the sum total of the total acres owned by the family and total acreage of lands let in minus total acres let out. Total acreages of all lands owned and actually possessed by the family have been accordingly calculated and shown in columns (13) and (14), respectively.

It may be seen from the table that the families associated with 29 industries have owned lands. The families associated with chemical industry do not make any agricultural income as may be seen from column (5) of table 5. This may prehaps be due to the fact that the average size of cultivated land owned by the families engaged in the industry is the smallest (0 0039 acres) in the table and has been left as current fallow. The average size of cultivated lands owned is the highest in size, i.e., 10 acres, in the case of cycle parts industry. It is, however, less than 1 acre in all the other industries. It is further observed that the families associated with 17 industries let out cultivated lands owned by them. Those associated with cutlery, printing, photographs and "all other industries", in particular, have let out all lands they own. Families engaged in biscuits, cycle parts, bricks and

saw milling industries have greater willingness to let out the major share of lands owned. It also appears from the table that the families associated with rice products, vegetable oils, cotton textiles, chemicals, blacksmith, locks, bidi, textiles dyeing, unspecified industries, hay cutting, dairy and musical instruments industries retain all owned lands under khas cultivation. It is also noticeable that except in the cases of rope and dairy industries, no additional lands have been let in for purposes of cultivation. Lands let in by these industries are also not significant in area, the actual figures being 0.12 and 0.18 acres respectively. Lands other than cultivated are mostly those not available for cultivation. Only in the cases of cycle parts and locks industries the size of other lands is more than I acre. It should be noted in this connection that the estimates for the latter industry is based on two samples only. Other details may be read from the table itself.

Table 7: Production of crops grown per associated family by industrics and by varieties of crops.—Details were furnished in table (6) in respect of lands which are either owned or possessed. In the case of land let out the owners are either getting an annual rent or the share of the total crops grown. In the cases of cultivated lands let in and in own possession the family gets the produce of the lands. The total income from agriculture has been correspondingly shown in table 5 already discussed. The present table shows the total quantity and the value of the crops actually grown by the families by own cultivation.

Out of all industries possessing cultivated lands, families associated with cutlery, printing, photographs and "all other industries" had let out their lands as stated earlier and as such no principal crops were grown by them. In 4 industries, namely, cotton textiles, chemicals, rubber manufacture and saw milling, the families produce no principal crops as may be seen from the table. This may perhaps be due to the small size of holdings as these industries do not possess more than 0.03 acre of land under khas cultivation which have perhaps been left as current fallow. In the rest of the cases paddy has been the most important crop grown. Families associated with 5 industries only, namely, general engineering, woodware, rope, gold ornaments and watch repairing have grown pulses as additional crops. Jute appears to have been grown by the families associated with 4 industries, namely, woodware, textiles dueing, rope and gold ornaments, while sugarcane has been grown only by the families associated with rope industry. It may be seen that although values of crops have been shown, quantities have not been entered against them in some cases, because information regarding them was not available.

Table 8: Percentage distribution of family expenditure on groups of items of the associated families by industries.—This table gives details in the percentage expenditure on the major heads of consumption, namely, (1) food, (2) fuel and light, (3) clohting, (4) house rent and (5) miscellaneous, These five major heads of consumption are the usually accepted five groups taken into account in the construction of the cost of living index numbers. The expenditure on total food has been subdivided into two classes, viz., (i) cereals and (ii) all other food items.

It may be seen from the table that as between the different heads of consumption, the percentage expenditure on total food is the highest except in the case of hay cutting industry where the highest expenditure appears to have been made on miscellaneous items of consumption.

As between the industries the percentage expenditure on total food is comparatively less in the following 3 industries, namely, vegetable oils, groundnut decorticating and hay cutting. It is comparatively high in laundry and brush manufacture industries. It could be stated therefore, that as far as standard of living is concerned, the former group fares better and the latter worse than the averages amongst these families engaged in small industries. Next in importance is the expenditure on miscellaneous items except in the cases of steelwire products and locks industries where the expenditure on house rent is greater than that on miscellaneous items. It is also observed that, generally speaking, expenditure on clothes is always greater than that on fuel and light except in the cases of footwear, wood chopping, tobacco products and laundry industries. The percentage expenditure on house rent appears to be the highest in the case of steelwire products industry. Other details may be read from the table itself.

Table 9: Average number of man-months worked per establishment by industries and by total value of assets.—This table indicates the average number of man-months worked in each industry classified by values of assets. Six different ranges in the value of assets have been envisaged in this study beginning from the range "Re. 1 to Rs. 1000" and ending with the range "Rs. 5,001 and above". It will be realised that in a general enquiry of this nature, if was not possible to collect reliable data about working capital. An attempt was, however, made to collect information about current assets and liabilities as shown in the next two tables. The sources of liabilities have also been shown in table 12. It will be seen from the next table that assets include land and buildings, machineries and tools, etc., as well as stocks, amount due from customers and cash as on the date of enquiry. The liabilities, that is, the amount owed to others as on the date of enquiry may be read from table 11. It is to be noted that the values shown for land and buildings, machineries and tools, stocks, etc., are rough estimates only. Details about man-months of employment provided by the establishments of various industries in the different categories and belonging to the six groups of assets may be read in the table itself.

It may be noted from the table that all establishments under rice products and thread-ball making industries have assets lying between Re. 1 and Rs .1.000. In the cases of steel-wire products, brush manufacture and coir products industries, however, assets do not fall below Rs. 5,001. It is also observed that in all establishments under vegetable oils and saw milling industries, the total value of assets exceeds Rs. 2,000 and Rs. 3,000 respectively. The total value of assets of most of the establishments of each of the remaining industries lies between Re. 1-Rs. 1,000, except in the cases of wheat products, soan, cotton textiles, chemicals, brass products, steel trunk, cycle parts, rubber manufacture, bricks, woodware, groundnut decorticating, printing, hosiery, textiles dyeing, dairy, mats and "all other industries". It may be stated here that, generally speaking more persons are employed as assets increase in soap, paper products, brass products, blacksmith, saw milling, groundnut decorticating, shawl repairing, hosiery, tailoring, rope, unspecified industries, toys, photoframing, carts and mats industries. Employment, however, falls as assets increase in 3 industries, namely, locks, footwear and wood chopping. It may further be observed that in each industry the establishments having assets of more than Rs. 5,000 provides for maximum employment in comparison with the other establishments, there being exceptions, however, in the cases of biscuits, sweets, chemicals, general engineering, steel trunk, cutlery, bricks, bidi, textiles dying.

Bureau of Applied E-conomics &

315/21.5.76

gold ornaments, hay cutting and "all other industires". Other details may be read from the table itself.

Table 10: Average value (Rs.) of assets per establishment by industries and by different assets.—This table furnishes an idea of the average value of different types of assets. It also shows average value of assets in different categories.

Assets in land and building are found in all the industries of the district excepting the following four industries, namely, rice products, tanning, steelwire products and shawl repairing. It is less than Rs. 50 in rubber manufacture, thread-ball making, photoframing and musical instruments. In the case of brush manufacture industry it is the highest (Rs. 85,000). It is noticeable that in several industries even non-mechanised establishments use machines and tools that are hand-operated. The brush manufacture industry has machineries worth Rs. 39,100, which is the highest value in this item. The value of machines possessed is as high as Rs. 11,909 in vegetable oils, Rs. 12,000 in steel wire products, Rs. 19,765 in cycle parts and Rs. 11,954 in hosiery industries. Machines are not used by rice products, tanning, wood chopping, bamboo products, tobacco products, bidi, shawl repairing, thread-ball making, toys, dairy, laundry, photoframing and mats industries. It is, however, noticeable that excepting the industry shawl repairing, all the industries of the area make use of tools. mechanised small establishments under cycle parts industry have an average value of Rs. 13,576 in this item. Value of assets in furniture is the highest (Rs. 1,853) in case of textiles dyeing industry. The value of livestock has been shown under "other assets" in the case of dairy industry. The value of stocks of raw materials is very high in the case of brush manufacture industry. It may be seen from the table that the estimates are based on one establishment only. Other details may be read from the table itself.

Table 10A: Estimated number of some important machines used by selected industries.—Table 10 gave the information on the average value of assets. This table shows the estimated number of some important machines ordinarily used in the case of 19 out of 63 industries in the area.

It is noticeable from the table that there are 538 automatic wheat grinding machines supplemented by 16 diesel machines working in some 557 establishments under wheat products industry. In the vegetable oils industry, each of the establishments on an average uses more than 8 ghanis with motor. In the 36 soap concerns of the area, the estimated number of stamping machines is 33 while that of cutting machines is 30. In woollen textiles industry an establishment possess, on an average, about 2 power looms. The estimated number of hand looms used in cotton textiles industry is 1,134 as against the total number of 311 establishments. In addition to these hand looms, there are 4 power looms and 16 semi-automatic looms in this industry. Work in the general engineering industry is carried on with the help of 1,073 lathe machines and 949 drill machines. The latter is found to be used also in the cutlery industry. In 82 establishments of steel trunk industry some 7 hand press machines are to be found. The estimated number of sewing machines to be found working in the small industries of the area is 4,515, only 158 of which are used in the footwear industry while the rest belong to some 2,615 tailoring concerns. Forty-seven air compressing machines are used by 50 establishments under rubber manufacture industry. In bricks, there are 16 surkhi milling machine and 17 tile press machines, while 16 motor-driven polishing machines are working in 1,060 gold ornaments concerns. On the average, one saw milling machine with motor is used by each establishment under saw milling industry. Printing is carried on with the help of 133 printing machines, only 30 of which are automatic, in addition to 4 machines for cutting purposes. In the case of hosiery industry, each establishment has more than 3 hosiery machines on an average. In 304 hay cutting concerns there are 303 cutting machines, 98 of which are power-driven. There are also 7 electro-plating machines in 12 electroplating concerns. The estimated number of cameras working in 85 photographs concerns is 149. The names of tools and accessories used by different industries of the district have been shown in Appendix E.

Table 11: Average value (Rs.) of liabilities per establishment by industries and different liabilities.—Table 11 shows the average value of liabilities as against the average value of assets given in table 10.

It may be seen from the table that not all establishments have liabilities. In fact, the number of establishments in any industry having liability on any account is comparatively small in the paper products and cotton textiles and musical instruments industries of the area. In the former industry out of a total of 96 establishments, only 4 have liabilities on account of land and buildings and 4 for raw materials. In cotton textiles industry 18 establishments have liabilities for raw materials and 8 for machines and tools in a total of 311 establishments. In musical instruments industry 4 establishments out of 67 have liabilities only for land and building. On account of the above peculiarities, liabilities on any account have been shown as averages for only those establishments which have particular liabilities. The estimated number of establishments having the liabilities have been shown within brackets in each case. The last column, however, gives the average for each industry as a whole taking into account all establishments in the industry concerned. These specialities should be remembered while reading the table. The averages for any industry as a whole could be calculated by multiplying the averages shown in the table by the number shown against it within parenthesis, and dividing the product by the total number of establishments shown in column (6) of table 1. The following points relating to the variability of the liability as between sources and industries may be noted:—

- (a) There is no liability whatsoever in the industries, namely, rice products, steelwire products, locks and threadball making.
- (b) In the case of 3 industries only, namely, vegetable oils, brush manufacture and coir products, the average value of liability per establishment as shown in column (12) is Rs. 10,000 or more. In 4 other industries, namely, bricks, tobacco products, hosiery and mats, the average value lies between Rs. 1,072 and Rs. 2,220. In each of these industries, average total assets as shown in column (15) of table 10 is higher than the average value of liability.
- (c) Seven industries, namely, wheat products, paper products, cycle parts, shawl repairing, hosiery, watch repairing and musical instruments have greater liabilities on account of fixed capital, i.e., land and buildings, machines and tools. Of these 4 industries, namely, cycle parts, shawl repairing, watch repairing and musical instruments have liabilities on account of land and buildings only.
- (d) A larger number of establishments have liabilities on account of raw materials than on any other account. The following industries, namely, vegetable oils, tanning, footwear, saw milling, wood chopping, bamboo products, tobacco products, groundnut decorticating and coir products, have liabilities only for raw materials.
- (e) The brush manufacture industry has liabilities only on account of miscellaneous expenditure.

(f) Information on the rates of interest is mostly not available. In a few cases it is observed that the rate of interest varies from 2 to 18 per cent.

Table 12: Distribution of liabilities (Rs.) per establishment by industries and by sources of liabilities.—The information on the average value of each type of liability was shown in table 11. This table gives an indication as to the sources of these liabilities with corresponding average values shown under each.

There is almost no liability from co-operative society. State help was received by 8 industries only, namely, cotton textiles, chemicals, brass products, general engineering, woodware, printing, hosiery and "all other industries". It is also found that 5 industries only incurred liabilities from banks. Most of the establishments having liabilities, however, meet their requirements from private sources on account of raw materials or other expenditure. It is to be noted, however, that the averages have been calculated over all the establishments in the industries concerned and not merely the establishments receiving the loans. Details may be read from the table itself.

Table 13: Labour employed per establishment by different age groups.—This table furnishes information on the labour employed under each of the 4 categories, in all the 63 industries, pooled together. Under both family and hired labour, details have been given showing the number engaged per establishment as also the man-months worked in the industry. Information on the number per establishment is shown in column (2) and (6) under family and hired labour respectively. Information on man-months engaged in industries is shown for family and hired labour in columns (3) and (7) respectively. Total number of man-months worked in the industry as recorded in column (9) is obviously the sum of the entries in columns (3) and (7). The proportion of family labour to total labour engaged in all industries is shown as percentages in column (10). In column (12) has been given the percentage of the available total labour which has been actually engaged in the industry.

Labourers of all the three age-groups shown in this table are to be found only in the small establishments, mechanised as well as non-mechanised. the larger establishments coming under categories 2 and 4, however, it is observed that children below 12 years in age are not employed. It is to be noted from the table that the number of family labour per establishment is less than that of hired labour in the mechanised industries and in the nonmechanised large establishments of the area; but in the case of non-mechanised small industries the case is just the reverse. This is as it ought to be, because the small industries which are principally run by family labour have been included under category 3. Consequently the number of man-months worked in the industries by family labour is less than that by hired labour in categories 1, 2 and 4, while in category 3 a greater portion of the total man-months worked in the industries has been worked by family labour, as may be seen from column (10) of this table. In column (12) it is observed that most of the total man-months available in the industries has been actually worked, and the percentage never falls below 74 except in the case of children (age-group: below 12 years) employed in the small mechanised concerns.

Table 14: Hired labour employed and wages paid per man-month per establishment by age groups.—This table is similar in structure to table 13. An indication has been given in this table as to the proportion of hired labour and their wages per man-month. Column (4) indicates the percentage of hired labour to total labour engaged in the industry, which is complementary to column (10) of table 13.

It may be seen from the table that wages paid to adults in the mechanised establishments are a little higher than what is paid to them by the non-mechanised establishments. The average monthly wages paid to the adults roughly lie between Rs. 53 and Rs. 56 in the non-mechanised establishments. while in the mechanised ones it varies from Rs. 61 to Rs. 66. received by children (age-group: 12-15 years) employed in the small nonmechanised concerns is about Rs. 34 while in other concerns they are paid between Rs. 20 and Rs. 27 on the average per month. It may be pointed out that wages received by children (age group: below 12 years) employed in the establishments under category I have not been shown in this table, as no reliable statistics in respect of these have been available. Children belonging to this age-group, however, receive about Rs. 12 per month in the establishments under category 3. It may again be seen that in the larger establishments mechanised as well as non-mechanised, wages received by adults are roughly 21 times of what is paid to the children (age-group 12-15 years) while in the small mechanised concerns they receive about thrice the money paid to children (age-group 12-15 years). In the establishments under category 3, adults are paid about 11 times the wages paid to children. who, in their turn, receive about three times the wages paid to underage children belonging to the lowest age-group.

Table 14A: Distribution of family labour by industries.—This table is supplementary to table 13. The distribution of man-months worked by sex and different age-groups of family labour per establishment for each industry has been shown in this table.

In all the industries employment is the highest in the age-group, 16 years and above. The average number of man-months worked by female adults is greater than that by male adults in the following 3 industries, namely, paper products, thread-ball making and mats. In groundnut decorticating industry the total number of man-months worked by female labour is greater than that worked by male labour. No female labour is employed in biscuits, blacksmith, steel trunk, cutlery, footwear, woodware, tobacco products, textiles dyeing, rope, hay cutting, watch repairing and photographs. It is further noted that in the following 16 industries, namely, soap, brass products, general engineering, steel-wire products, cycle parts, locks, rubber manufacture, saw milling, wood chopping, shawl repairing, gold ornaments, photo-framing, carts, musical instruments, brush manufacture and coir products, no female labour is also employed and they are run by male adults only, there being no children employed in these industries. Average number of man-months worked by adult males is the highest (31.33) in the case of coir products industry. In the case of threadball making industry it is the lowest (1.00). The average lies roughly between 10 and 20 in other industries except in vegetable oils, paper products, chemicals, groundnut decorticating, dairy, carts and mats. Children below 12 years of age are employed in 12 industries, while those belonging to the age-group 12-15 years are employed in 26 industries. It may be seen that except in sweets, earthenwares, paper products, chemicals, tobacco products, groundnut decorticating, hosiery, watch repairing, toys and laundry industries, children below 16 years do not work even for one month on the average and their contribution, therefore, is not remarkable. Other details may be read from the table itself.

Table 15: Consumption of fuel, lubricating materials, raw materials, etc. per establishment by industries.—This table furnishes the details of cost of production in respect of consumption of fuel, electricity, lubricating materials, raw materials, packing materials, etc. Figures of cost incurred on annual repairing charges and for work done through others are also indicated in this table.

It may be seen from the table that expenditure on raw materials is proportionately the highest in all the industries except in the cases of earthenwares, bricks, locks and groundnut decorticating. In the two former industries the principal raw material consumed is clay, which is a free gift of nature. Consequently the major share of costs goes to fuel items in the earthenwares industry while expenditure on fuel items has been greater than that on raw materials in the case of bricks industry. In bricks, however, the highest amount of cost has been incurred for work done through others. It is to be noted that the small non-mechanised concerns under locks industry were found not to incur any costs. In table 16 it will be observed that these establishments worked mainly on materials supplied by the In locks and groundnut decorticating industries the highest cost incurred is for the value of work done through outsiders. It is also noticed that all industries of the area with the exception of the following 6, namely, tanning, locks, bamboo products, threadball making, rope and mats consume electricity. The highest expenditure on this item is incurred by the vegetable oils industry, the actual figure being Rs. 4,492. Expenditure on this item is as high as Rs. 883 and Rs. 917 in saw milling and groundnut decorticating industries respectively. It is further observed that no item of fuel is consumed in the following industries, namely, tanning, threadball making and photographs. Of the 28 industries that consume coal and coke, expenditure on this item is the highest (Rs. 3,103) in textiles dyeing industry. It may also be noted in this connection that 22 small mechanised establishments under woodware industry consume coal and coke worth Rs. 5 on the average, which is quite insignificant if the industry is considered as a whole. Other fuels are consumed by most of the industries of the area. Expenditure on other fuels is the highest (Rs. 935) in soap The next highest expenditure on this item appears in the case of biscuits industry. It will further be seen that 42 industries got a portion of their work done through outsiders for which some amounts were paid. Expenditure on this account exceeds Rs. 1,000 in the cases of vegetable oils (Rs. 1,236), cotton textiles (Rs. 1,174), steel trunk (Rs. 1,056), cycle parts (Rs. 1,821), bricks (Rs. 4,730), woodware (Rs. 1,582), bidi (Rs. 1,860), groundnut decorticating (Rs. 1,042), hosiery (Rs. 1,179) and textiles dyeing (Rs. 8,711). It is, however, less than Rs. 100 in the cases of wheat products, sweets, soap, tanning, paper products, chemicals, blacksmith, cutlery, footwear, rubber manufacture, wood chopping, printing, shawl repairing, tailoring, rope, watch repairing, photoframing, musical instruments and "all other industries". Other details may be read from the table itself.

Table 15A: Quantity and value of raw materials consumed per establishment by industries.—This table is supplementary to table 15 where values of raw materials consumed have been furnished. In this table is given an indication of the quantity and value of some major items of raw materials consumed by different industries. An attempt has been made to select two principal basic materials in respect of each industry of the district.

In the following 20 industries, namely, tanning, earthenwares, chemicals, general engineering, cycle part, footwear, rubber manufacture, printing, shawl repairing, textiles dyeing, tailoring, rope, unspecified industries, gold ornaments, hay cutting, watch repairing, dairy, laundry, photographs and musical instruments, no specification is possible. Names of the principal basic materials selected for each industry are shown in columns (3) and (10). Units of quantities of these items are given in columns (4) and (11) respectively. The total quantities consumed in respect of these items are furnished in columns (8) and (15) and the values against them have been shown in columns (9) and (16) respectively. Value of raw materials other

than these two selected items have been given in column (17). The sources from which the two principal basic materials have been obtained are shown in columns (5), (6), (7) and in columns (12), (13), (14) respectively. materials have been taken as locally produced wherever these were stated to be produced within an area of about 10 miles of radius from the local market place from where the raw materials are purchased. Quantities of such materials have been shown separately in columns (5) and (12) for those purchased in local markets or hats or bazars and in columns (6) and (13) for those purchased from outside the local markets or hats. Figures for consumption of materials not produced locally have been shown in columns (7) and (14). Obviously columns (5), (6) and (7) add up to the total shown in column (8). Similar is the case of the total shown in column (15). The number of establishments in each industry has not been shown in this table and reference to this may be made in table 15. Quantity and value figures of the principal items of raw materials consumed by "all other industries" have not been shown.

It may be noted from the table that in the cases of rice products, vegetable oils, steel-wire products, saw milling, wood chopping, groundnut decorticating, hosicry, threadball making, mats, brush manufacture and coir products industries, no information has been available in respect of the second principal basic material selected for each of these industries. It may also be seen that the quantities of materials consumed by groundnut decorticating, toys, photoframing, earts, mats, brush manufacture and coir products industries cannot be given and only values are shown. In the cases of blacksmith, woodware and bamboo products industries the quantity of iron, timber and cane consumed by the respective industries could not also be furnished. Details of quantity and value of the principal items may be seen from the table. In the case of threadball making industry it may be observed that materials other than the basic one selected for this industry are not consumed, while in the cases of sweets, soap, cutlery, hosiery, toys and brush manufacture industries the value of other materials consumed is proportionately very high.

Table 16: Production and sale of finished goods, amount received for work done for others per establishment and value of work done per manmonth by industries.—This table gives the value of production as against the cost of production shown in table 15. Values of goods sold through various agencies have been shown in columns (6) to (10). The value of work done on the materials supplied by customers is given in column (12). In column (15) has been shown the value of work done per man-month. It will be seen from the table that the total value of work done shown in column (13) is the sum total of total value of production actually made during the year in column (5) and the total amount received for work done for others in column (12).

The distribution of total value of work done (Rs.) as between industries has already been shown into 7 ranges in section (j) under paragraph 10·1 in the discussion of table 1. It is noticeable, however, that the total value of work done in mechanised concerns is much greater than that in the non-mechanised concerns in wheat products, paper products, cotton textiles, general engineering, cutlery, cycle parts, locks, woodware, groundnut decorticating, printing, textiles dyeing, unspecified industries, hay cutting, coir products and "all other industries". In the cases of sweets, chemicals, steel trunk and hosiery industries, the average value of work done by the large non-mechanised establishments appears to be higher than that done by the establishments belonging to any other category. The average value of work done by the non-mechanised establishments under rubber manufac-

ture, bricks and gold ornaments industries appears to be greater than that done by the mechanised concerns belonging to the respective industries. In the case of brass products industry, however, the value of work done by an establishment under category 1 is on the average lower than that done by one under category 3, while in a concern under category 2 the value of production is much more than that in an establishment under category 4. Value of work done depends primarily on the value of the materials on which the work is done. So there can be no valid comparison in respect of this between different industries. These figures shown in the table give an idea about the average of all establishments within any industry. example, value of work done per man-month in the wheat products industry as a whole is Rs. 174. Multiplying by 12, the value of work done in a year would become Rs. 2,088 if only 1 person was employed. An establishment belonging to this industry, if it employs 2 persons, would produce goods worth about Rs. 4,176 and so on. This table also shows the value of work done per man-month for each category and a comparison may be made as between the categories themselves. It will be seen that the value of work done per man-month is greater in the mechanised concerns, as it should be, than the non-mechanised concerns in wheat products, sweets, paper products, cotton textiles, general engineering, cycle parts, locks, woodware, groundnut decorticating, unspecified industries, hay cutting and coir products. is just the reverse in the cases of steel trunk, cutlery, rubber manufacture, bricks, hosiery, gold ornaments and "all other industries". It may be seen that of all the agencies through which sale of finished goods of small industries of the area has been effected, the contribution of dadandars, co-operative stores and agents is insignificant. It is observed that 4 industries, namely, locks, groundnut decorticating, dairy and photoframing sell exclusively through their own retail establishments, while 3 industries, namely, steelwire products, brush manufacture and coir products market their finished goods only through own wholesale establishments. The rest of the industries excepting rubber manufacture, shawl repairing, reparing and laundry sell through both wholesale and retail establishments. Here again 14 industries, namely, biscuits, vegetable oils, earthenwares, cotton textiles, brass products, saw milling, tobacco products, bidi, hosiery, textiles dyeing, rope, unspecified industries, mats and "all other industries" make greater amounts of sale through own wholesale establishments than through own retail organisations. It appears from the table that in rubber manufacture, shawl repairing, watch repairing and laundry industries, the total value of work done is from the materials supplied by others. Value of work done on materials supplied by others is much greater than that on own materials in the case of 4 industries, namely, groundnut decorticating, printing, tailoring, and carts. This is quite apparent from the nature of the work done by these industries.

Table 16A: Quantity and value of finished products made during the year for sale per establishment by industries.—This table which is supplementary to table 16, gives details of the quantity and value of items of finished products made during the year.

An attempt has been made to select two principal items of finished products in respect of all the industries of the district excepting the following ones, namely, tanning, earthenwares, chemicals, general engineering, blacksmith, cycle parts, rubber manufacture, printing, threadball making, textiles dyeing, tailoring, rope, unspecified industries, gold ornaments, hay cutting, watch repairing, laundry, photographs and musical instruments, where no specification is possible. Names of the two principal products selected for each industry are shown in columns (3) and (7) and units of quantity of these items in columns (4) and (8) respectively. The total

quantities produced in respect of these items are furnished in columns (5) and (9) and values of corresponding quantities in columns (6) and (10) respectively. Values of finished products other than these two selected items have been given in column (11). The number of establishments in each industry has not been shown in this table for which table 16 may be consulted. Quantity and value figures of principal products of "all other industries" have not been furnished.

It may be seen from the table that no information on the quantity and value has been available in respect of the second principal product selected for the respective industries except in the following 14 industries, namely, wheat products, biscuits, paper products, cotton textiles, brass products, steel trunk, cutlery, footwear, bricks, woodware, bamboo products, tobacco products, hosiery and toys. It is further to be noted that in sweets, brass products, steel-wire products, locks, bricks, wood chopping, woodware, bamboo products, tobacco products (other than tobacco), toys, dairy, photoframing and brush manufacture industries, the quantities of principal products cannot be given and only values are shown. In the case of 8 industries, namely, soap, locks, steelwire products, footwear, wood chopping, bidi, mats and brush manufacture it is observed that all products made by these industries are only those that have been specified in the table for the respective industries. In 4 industries, namely, cutlery, woodware, groundnut decorticating and dairy, the proportion of values of miscellaneous items other than the principal products selected for each industry are found to be very high. Other details may be read from the table itself.

Availability of raw materials consumed by the small industries of the arch and competition, if any, experienced by them from foreign goods and Indian mill-made goods, have been shown in Appendix F. It may be observed from the table that except in button manufacturing and conch products industries, no other concern is experiencing any major difficulty with regard to availability of raw materials. It may also be noticed that mild competition from foreign goods is faced by the finished products of the electroplating industry of the area. Competition, however, from mill-made goods in faced appreciably by the following industries, namely, biscuits, vegetable oils, paints, cotton textiles, steel trunk, steelwire products, bricks, printing and mats industries. There are chances of competition, although to a smaller extent, from mill-made goods in wheat products, soap, tanning, chemicals, brass products, blacksmith, cutlery, cycle parts, footwear, hosiery, rope, coach building and apparel industries. It may be pointed out, however, in this connection that competitive goods, include among other fibrings, mill-made substitutes also.

Table 17: Average cost as percentage of average value of production per establishment by industries.—Expenditure on rents and interests and labour which was not shown in table 15, has been shown in this table in addition to the cost of raw materials, tuels, etc. In columns (6) and (7) have been shown the total amounts spent on hired labour, both including and excluding casual workers to give an idea as to the extent of such labour employed. Total cost per establishment excluding family labour has been shown in column (12) of this table and in column (13) has been given the average value of production per establishment. The difference between the two columns indicates the average gross profit earned by the industry. Cost as recorded in column (12) has been expressed as percentage of the value of production as recorded in column (13) and shown in column (14). The lower the magnitude of this percentage the higher will be the profit per unit value of production.

It is observed that the percentage is as high as 88.84 in threadball making industry indicating that the industry is running with much less profits and if the estimated cost on family labour as shown in column (8) is considered against the total cost excluding family labour shown in column (12), it may be said that the industry is running under stringent conditions. It may also be observed, again, that in those cases where the percentage are low it does not necessarily mean that profits are high, because the total cost has been calculated excluding the remuneration which normally should have gone to family labour. For example, the low percentage (47.88) found in the case of one non-mechanised small establishment under groundnut decorticating industry apparently indicates that cost of production is only about 48 per cent. of the value produced, and the profit is about 52 per cent. It will be noted in column (8) that the cost of family labour estimated on the basis of wages paid to hired labour exceeds twice the value produced. This means, therefore, that the owner of the industry is not getting as much money as he could expect to receive by hiring himself out. The entries in column (8), therefore, should be taken into account while assessing the profits. No percentage has been shown in the case of the small non-mechanised concerns under the locks industry, because no cost is incurred by them as has already been mentioned in connection with other tables. Other details may be read from the table itself.

N. CHAKRAVARTI.

Director,

State Statistical Bureau,
Government of West Bengal.

Serial No.	Code No.	Name of industries.
1	1	Wheat flour, atta mills (wheat products).
2	2	Rice milling.
3	2A	Rice products
4	3	Biscuit making (including bakeries and confectioneries).
5	3 A	Sweets, ice-cream, batasa, chanabhaja, etc.
ð	4	Fruit and vegetables processing.
7	5	Sugar manufacture.
.8	6	Distilleries and breweries (including power alcohol manufacturing).
9	7	Starch manufacture.
10	8	Vegetable oils-oilseed crushing and extraction and processing.
11	9	Paints and varnishes.
12	10	Soap.
13	11	Tanning.
14	12	Cement.
15	13	Glass and glassware including bangles.
16	14	Ceramic.
17	14A	Earthenwares.
18	15	Plywood and its products.
19	16	Paper, paper-board including straw board.
20	16A	Paper and cradboard products.
21	17	Matches.
22	18	Cotton textiles-spinning and weaving.
28	19	Woolen textiles.
24	20	
25	21	
26	22	Aluminium, copper and barss-processes from ore smelting to manufacture final products ready for use.
27	23	Iron and steel-smelting (including blast furnace operations), rolling and re-rolling.
28	24	Bicycles.
29	25	Sewing machines.
80	26	Gas plants.
81	27	Electric lamps.
82	- 28	Electric fans.
33	29	General-engineering and electrical engineering (excluding generation and transformation of electrical energy).

3890

APPENDIX B-contd.

Serial No.	Code No.	Name of industries.
34	29A	Blacksmith.
35	29B	Steel trunk.
36	29C	Steel wire products.
37	29D	Cutlery.
38	29E	Cycle parts.
3 9	29F	Locks.
40	30	Footwear and leather manufactures.
41	31	Rubber and rubber manufacture (including rubber substitutes), tyres and tyre repairing.
42	32	Enamelware.
43	33	Hume pipes and other cement and cencrete products (including reinforced products).
• 44	34	Asbestos and asbestos cement products.
45	35	Bricks, tiles, lime and surkhi manufacturing.
46	36	Lac.
47	37	Turpentine and resin.
48	38	Plastic (including manufacture of gramphone records).
49	39	Petroleum refining.
50	40	Saw milling.
51	40A	Wood chopping.
52	41	Woodware (including furniture manufacturing).
53	41A	Bamboo and cane products.
54	42	Tea manufacturing.
55	43	Tobacco products.
56	43A	Bidi products.
57	44	Groundnut decorating, cashew nut processing and dal manufacturing.
58	45	Printing (including lithographing) and book-binding, embossing.
59	45A	Rubber stamps.
60	46	Webbing, narrow fabrics, embroidery and lace manufacturing, shawl-repairing.
61	47	Hosiery and other knitted goods.
62	48	Thread and threadball making.
63	49	Textiles, dyeing, bleaching, finishing and processing (including marcerising finishing, calendering, glazing, proofing, etc.).
64	50	Clothing and tailoring including beddings and gunny bags repairing.
65	51	Cotton ginning and pressing.
66	752	Rope making.

APPENDIX B-concld.

Serial No.	Code No.	Name of industries.
67	53	Silk miscellaneous.
68	53A	Silk rearing.
69	53B	Silk realing.
70	53 C	Silk weaving.
71	53 D	Artificial silk.
72	54	Jute pressing.
73	55	Electricity generation and transformation.
74	56	Automobiles and coach building including other vehicles.
75	57	Ship building.
76	58	Railway workshop.
77	*60	Aircraft assembling repairs and servicing.
78	61	Railway wagon manufacturing.
79	62	Textiles machinery and accessories (bobbins, shuttles, healds, reeds, pickers,
80	63	etc.). Unspecified industries except those shown below.
81	63A	Gold and silver ware, ornaments.
82	63B	Hay cutting.
83	63 C	Electroplating, minaplating and engraving.
84	63D	Watch repairing, pen and spectacles repairing.
85	63E	Toy making (earthen toys, paper toys, wooden toys, tin and other metal toys and celluloid toys).
86	63F	Dairy.
87	63G	Laundry.
88	63H	Photographs and painting including signboard painting.
89	63I	Photo framing.
90 91	63J 63K	Carts. Apparel (cap making, hat making, turbans and shoe laces).
92	63L	Button manufacturing.
93	63M	Conch products.
94	63N	Musical instruments.
95	630	Wax products.
96	63P	Mats.
97	63Q	Sports goods.
98	63R	Brush manufacture.
99	638	Simple types of mathematical instruments.
100 -	63 T	Coir and coir products.

^{*59} is omitted, being ammunitions and explosives.
